### 70728 - Apache PHP-CGI Remote Code Execution

## Synopsis

The remote web server contains a version of PHP that allows arbitrary code execution.

## Description

The PHP installation on the remote web server contains a flaw that could allow a remote attacker to pass command-line arguments as part of a query string to the PHP-CGI program. This could be abused to execute arbitrary code, reveal PHP source code, cause a system crash, etc.

## Solution

Upgrade to PHP 5.3.13 / 5.4.3 or later.

## Risk Factor

High

## 134862 - Apache Tomcat AJP Connector Request Injection (Ghostcat)

### Synopsis

---

There is a vulnerable AJP connector listening on the remote host.

### Description

---

A file read/inclusion vulnerability was found in AJP connector. A remote, unauthenticated attacker could exploit this vulnerability to read web application files from a vulnerable server. In instances where the vulnerable server allows file uploads, an attacker could upload malicious JavaServer Pages (JSP) code within a variety of file types and gain remote code execution (RCE).

## 171340 - Apache Tomcat SEoL (<= 5.5.x)

### Synopsis

An unsupported version of Apache Tomcat is installed on the remote host.

### Description

According to its version, Apache Tomcat is less than or equal to 5.5.x. It is, therefore, no longer maintained by its vendor or provider.

Lack of support implies that no new security patches for the product will be released by the vendor. As a result, it may contain security vulnerabilities.

### See Also

<https://tomcat.apache.org/tomcat-55-eol.html>

### Solution

Upgrade to a version of Apache Tomcat that is currently supported.

### Risk Factor

## 51988 - Bind Shell Backdoor Detection

### Synopsis

The remote host may have been compromised.

### Description

A shell is listening on the remote port without any authentication being required. An attacker may use it by connecting to the remote port and sending commands directly.

### Solution

Verify if the remote host has been compromised, and reinstall the system if necessary.

### Risk Factor

Critical

### CVSS v3.0 Base Score

## 32314 - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness

### Synopsis

The remote SSH host keys are weak.

### Description

The remote SSH host key has been generated on a Debian or Ubuntu system which contains a bug in the random number generator of its OpenSSL library.

The problem is due to a Debian packager removing nearly all sources of entropy in the remote version of OpenSSL.

An attacker can easily obtain the private part of the remote key and use this to set up decipher the remote session or set up a man in the middle attack.

### See Also

## 32321 - Debian OpenSSH/OpenSSL Package Random Number Generator Weakness (SSL check)

### Synopsis

The remote SSL certificate uses a weak key.

### Description

The remote x509 certificate on the remote SSL server has been generated on a Debian or Ubuntu system which contains a bug in the random number generator of its OpenSSL library.

The problem is due to a Debian packager removing nearly all sources of entropy in the remote version of OpenSSL.

An attacker can easily obtain the private part of the remote key and use this to decipher the remote session or set up a man in the middle attack.

## 20007 - SSL Version 2 and 3 Protocol Detection

### Synopsis

---

The remote service encrypts traffic using a protocol with known weaknesses.

### Description

---

The remote service accepts connections encrypted using SSL 2.0 and/or SSL 3.0. These versions of SSL are affected by several cryptographic flaws, including:

- An insecure padding scheme with CBC ciphers.
- Insecure session renegotiation and resumption schemes.

An attacker can exploit these flaws to conduct man-in-the-middle attacks or to decrypt communications between the affected service and clients.

Although SSL/TLS has a secure means for choosing the highest supported version of the protocol (so that these versions will be used only if the client or server support nothing better), many web browsers implement this in an unsafe way that allows an attacker to downgrade a connection (such as in POODLE). Therefore, it is recommended that these protocols be disabled entirely.

NIST has determined that SSL 3.0 is no longer acceptable for secure communications. As of the date of enforcement found in PCI DSS v3.1, any version of SSL will not meet the PCI SSC's definition of 'strong cryptography'.

```

## 61708 - VNC Server 'password' Password

### Synopsis

A VNC server running on the remote host is secured with a weak password.

### Description

The VNC server running on the remote host is secured with a weak password. Nessus was able to login using VNC authentication and a password of 'password'. A remote, unauthenticated attacker could exploit this to take control of the system.

### Solution

Secure the VNC service with a strong password.

## 125855 - phpMyAdmin prior to 4.8.6 SQLi vulnerability (PMASA-2019-3)

### Synopsis

The remote web server hosts a PHP application that is affected by SQLi vulnerability.

### Description

According to its self-reported version number, the phpMyAdmin application hosted on the remote web server is prior to 4.8.6. It is, therefore, affected by a SQL injection (SQLi) vulnerability that exists in designer feature of phpMyAdmin. An unauthenticated, remote attacker can exploit this to inject or manipulate SQL queries in the back-end database, resulting in the disclosure or manipulation of arbitrary data.

Note that Nessus has not attempted to exploit these issues but has instead relied only on the application's self-reported version number.

### See Also

<http://www.nessus.org/u?c9d7fc8c>

### Solution

Upgrade to phpMyAdmin version 4.8.6 or later.

Alternatively, apply the patches referenced in the vendor advisories.

### Risk Factor

## 39469 - CGI Generic Remote File Inclusion

### Synopsis

---

Arbitrary code may be run on the remote server.

### Description

---

The remote web server hosts CGI scripts that fail to adequately sanitize request strings. By leveraging this issue, an attacker may be able to include a remote file from a remote server and execute arbitrary commands on the target host.

### See Also

---

## 136769 - ISC BIND Service Downgrade / Reflected DoS

### Synopsis

The remote name server is affected by Service Downgrade / Reflected DoS vulnerabilities.

### Description

According to its self-reported version, the instance of ISC BIND 9 running on the remote name server is affected by performance downgrade and Reflected DoS vulnerabilities. This is due to BIND DNS not sufficiently limiting the number fetches which may be performed while processing a referral response.

An unauthenticated, remote attacker can exploit this to cause degrade the service of the recursive server or to use the affected server as a reflector in a reflection attack.

### See Also

<https://kb.isc.org/docs/cve-2020-8616>

### Solution

Upgrade to the ISC BIND version referenced in the vendor advisory.

### Risk Factor

Medium

### CVSS v3.0 Base Score

## 42256 - NFS Shares World Readable

### Synopsis

The remote NFS server exports world-readable shares.

### Description

The remote NFS server is exporting one or more shares without restricting access (based on hostname, IP, or IP range).

### See Also

<http://www.tldp.org/HOWTO/NFS-HOWTO/security.html>

### Solution

Place the appropriate restrictions on all NFS shares.

### Risk Factor

Medium

### CVSS v3.0 Base Score

7.5 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:N/A:N)

### CVSS v2.0 Base Score

### Plugin Information

Published: 2009/10/26, Modified: 2024/02/21

### Plugin Output

tcp/2049/rpc-nfs

```
The following shares have no access restrictions :  
  
/ *
```

## 59088 - PHP PHP-CGI Query String Parameter Injection Arbitrary Code Execution

### Synopsis

The remote web server contains a version of PHP that allows arbitrary code execution.

### Description

The PHP installation on the remote web server contains a flaw that could allow a remote attacker to pass command-line arguments as part of a query string to the PHP-CGI program. This could be abused to execute arbitrary code, reveal PHP source code, cause a system crash, etc.

### See Also

<http://eindbazen.net/2012/05/php-cgi-advisory-cve-2012-1823/>

## 42873 - SSL Medium Strength Cipher Suites Supported (SWEET32)

### Synopsis

The remote service supports the use of medium strength SSL ciphers.

### Description

The remote host supports the use of SSL ciphers that offer medium strength encryption. Nessus regards medium strength as any encryption that uses key lengths at least 64 bits and less than 112 bits, or else that uses the 3DES encryption suite.

Note that it is considerably easier to circumvent medium strength encryption if the attacker is on the same physical network.

### See Also

<https://www.openssl.org/blog/blog/2016/08/24/sweet32/>

<https://sweet32.info>

### Solution

Reconfigure the affected application if possible to avoid use of medium strength ciphers.

### Risk Factor

Medium

### CVSS v3.0 Base Score

## 90509 - Samba Badlock Vulnerability

### Synopsis

An SMB server running on the remote host is affected by the Badlock vulnerability.

### Description

The version of Samba, a CIFS/SMB server for Linux and Unix, running on the remote host is affected by a flaw, known as Badlock, that exists in the Security Account Manager (SAM) and Local Security Authority (Domain Policy) (LSAD) protocols due to improper authentication level negotiation over Remote Procedure Call (RPC) channels. A man-in-the-middle attacker who is able to intercept the traffic between a client and a server hosting a SAM database can exploit this flaw to force a downgrade of the authentication level, which allows the execution of arbitrary Samba network calls in the context of the intercepted user, such as viewing or modifying sensitive security data in the Active Directory (AD) database or disabling critical services.

### See Also

<http://badlock.org>

<https://www.samba.org/samba/security/CVE-2016-2118.html>

### Solution

Upgrade to Samba version 4.2.11 / 4.3.8 / 4.4.2 or later.

### Risk Factor

Medium

```

## 19704 - TWiki 'rev' Parameter Arbitrary Command Execution

### Synopsis

The remote web server hosts a CGI application that is affected by an arbitrary command execution vulnerability.

### Description

The version of TWiki running on the remote host allows an attacker to manipulate input to the 'rev' parameter in order to execute arbitrary shell commands on the remote host subject to the privileges of the web server user id.

### See Also

<http://www.nessus.org/u?c70904f3>

### Solution

Apply the appropriate hotfix referenced in the vendor advisory.

### Risk Factor

High

### CVSS v3.0 Base Score

## 36171 - phpMyAdmin Setup Script Configuration Parameters Arbitrary PHP Code Injection (PMASA-2009-4)

### Synopsis

The remote web server contains a PHP application that is affected by a code execution vulnerability.

### Description

The setup script included with the version of phpMyAdmin installed on the remote host does not properly sanitize user-supplied input before using it to generate a config file for the application. This version is affected by the following vulnerabilities :

- The setup script inserts the unsanitized verbose server name into a C-style comment during config file generation.
- An attacker can save arbitrary data to the generated config file by altering the value of the 'textconfig' parameter during a POST request to config.php.

An unauthenticated, remote attacker can exploit these issues to execute arbitrary PHP code.

### See Also

<https://www.tenable.com/security/research/tra-2009-02>

[http://www.phpmyadmin.net/home\\_page/security/PMASA-2009-4.php](http://www.phpmyadmin.net/home_page/security/PMASA-2009-4.php)

### Solution

Upgrade to phpMyAdmin 3.1.3.2. Alternatively, apply the patches referenced in the project's advisory.

### Risk Factor

High

### VPR Score

6.7

### EPSS Score

0.0294

## 12085 - Apache Tomcat Default Files

### Synopsis

The remote web server contains default files.

### Description

The default error page, default index page, example JSPs and/or example servlets are installed on the remote Apache Tomcat server. These files should be removed as they may help an attacker uncover information about the remote Tomcat install or host itself.

### See Also

<http://www.nessus.org/u?4cb3b4dd>

[https://www.owasp.org/index.php/Securing\\_tomcat](https://www.owasp.org/index.php/Securing_tomcat)

### Solution

Delete the default index page and remove the example JSP and servlets. Follow the Tomcat or OWASP instructions to replace or modify the default error page.

### Risk Factor

Medium

### CVSS v3.0 Base Score

5.3 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:N/A:N)

### CVSS v2.0 Base Score

5.0 (CVSS2#AV:N/AC:L/Au:N/C:P/I:N/A:N)

### Plugin Information

Published: 2004/03/02, Modified: 2024/09/03

### Plugin Output

tcp/8180/www

The following default files were found :

<http://192.168.50.150:8180/tomcat-docs/index.html>

The server is not configured to return a custom page in the event of a client requesting a non-existent resource.  
This may result in a potential disclosure of sensitive information about the server to attackers.

## 11411 - Backup Files Disclosure

### Synopsis

It is possible to retrieve file backups from the remote web server.

### Description

By appending various suffixes (ie: .old, .bak, ~, etc...) to the names of various files on the remote host, it seems possible to retrieve their contents, which may result in disclosure of sensitive information.

### See Also

<http://www.nessus.org/u?8f3302c6>

### Solution

Ensure the files do not contain any sensitive information, such as credentials to connect to a database, and delete or protect those files that should not be accessible.

### Risk Factor

Medium

### CVSS v2.0 Base Score

5.0 (CVSS2#AV:N/AC:L/Au:N/C:P/I:N/A:N)

### Plugin Information

Published: 2003/03/17, Modified: 2023/07/10

### Plugin Output

tcp/80/www

```
It is possible to read the following backup files :
```

- File : /twiki/bin/view/Main/WebHome~  
URL : http://192.168.50.150/twiki/bin/view/Main/WebHome~
- File : /twiki/bin/search/Main/SearchResult~  
URL : http://192.168.50.150/twiki/bin/search/Main/SearchResult~

## 40984 - Browsable Web Directories

### Synopsis

Some directories on the remote web server are browsable.

### Description

Multiple Nessus plugins identified directories on the web server that are browsable.

### See Also

<http://www.nessus.org/u?0a35179e>

### Solution

Make sure that browsable directories do not leak confidential information or give access to sensitive resources. Additionally, use access restrictions or disable directory indexing for any that do.

### Risk Factor

Medium

### CVSS v3.0 Base Score

5.3 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:N/A:N)

## 44136 - CGI Generic Cookie Injection Scripting

### Synopsis

---

The remote web server is prone to cookie injection attacks.

### Description

---

The remote web server hosts at least one CGI script that fails to adequately sanitize request strings with malicious JavaScript.

By leveraging this issue, an attacker may be able to inject arbitrary cookies. Depending on the structure of the web application, it may be possible to launch a 'session fixation' attack using this mechanism.

Please note that :

- Nessus did not check if the session fixation attack is feasible.
- This is not the only vector of session fixation.

### See Also

---

[https://en.wikipedia.org/wiki/Session\\_fixation](https://en.wikipedia.org/wiki/Session_fixation)

[https://www.owasp.org/index.php/Session\\_Fixation](https://www.owasp.org/index.php/Session_Fixation)

```

## 49067 - CGI Generic HTML Injections (quick test)

### Synopsis

The remote web server may be prone to HTML injections.

### Description

The remote web server hosts CGI scripts that fail to adequately sanitize request strings with malicious JavaScript. By leveraging this issue, an attacker may be able to cause arbitrary HTML to be executed in a user's browser within the security context of the affected site.

The remote web server may be vulnerable to IFRAME injections or cross-site scripting attacks :

- IFRAME injections allow 'virtual defacement' that might scare or anger gullible users. Such injections are sometimes implemented for 'phishing' attacks.
- XSS are extensively tested by four other scripts.
- Some applications (e.g. web forums) authorize a subset of HTML without any ill effect. In this case, ignore this warning.

### See Also

<http://www.nessus.org/u?602759bc>

### Solution

Either restrict access to the vulnerable application or contact the vendor for an update.

### Risk Factor

Medium

### CVSS v2.0 Base Score

4.3 (CVSS2#AV:N/AC:M/Au:N/C:N/I:P/A:N)

### References

tcp/80/www

192.168.50.150

Using the GET HTTP method, Nessus found that :

+ The following resources may be vulnerable to HTML injection :

+ The 'template' parameter of the /twiki/bin/oops/Main/WebHomemailto:webmasteryour/company CGI :

/twiki/bin/oops/Main/WebHomemailto:webmasteryour/company?template=%00<<<  
<"hsddvr%20>>>

----- output -----

```
<html><body>
<h1>TWiki Installation Error</h1>
Template file .<<<<"hsddvr >>>".tmpl not found or template directory
/var/www/twiki/templates not found.<p />
Check the $templateDir variable in TWiki.cfg.
-----
```

+ The 'page' parameter of the /mutillidae/ CGI :

/mutillidae/?page=%00<<<<"hsddvr%20>>>

----- output -----

```
<a href="./index.php?page=login.php">Login/Register</a>
</td>
<td><a href="./index.php?do=toggle-hints&page=.<<<<"hsddvr >>>">Toggle H
ints</a></td><td><a href="./index.php?do=toggle-security&page=.<<<<
"hsddvr >>>">Toggle Security</a></td>
<td><a href="set-up-database.php">Reset DB</a></td>
<td><a href="./index.php?page=show-log.php">View Log</a></td>
-----
```

Clicking directly on these URLs should exhibit the issue :  
(you will probably need to read the HTML source)

http://192.168.50.150/mutillidae/?page=%00<<<<"hsddvr%20>>>

## 55903 - CGI Generic XSS (extended patterns)

### Synopsis

The remote web server is prone to cross-site scripting attacks.

### Description

The remote web server hosts one or more CGI scripts that fail to adequately sanitize request strings with malicious JavaScript. By leveraging this issue, an attacker may be able to cause arbitrary HTML and script code to be executed in a user's browser within the security context of the affected site. These XSS vulnerabilities are likely to be 'non-persistent' or 'reflected'.

### See Also

## 39466 - CGI Generic XSS (quick test)

### Synopsis

The remote web server is prone to cross-site scripting attacks.

### Description

The remote web server hosts CGI scripts that fail to adequately sanitize request strings with malicious JavaScript. By leveraging this issue, an attacker may be able to cause arbitrary HTML and script code to be executed in a user's browser within the security context of the affected site.

These XSS are likely to be 'non persistent' or 'reflected'.

### See Also

[https://en.wikipedia.org/wiki/Cross\\_site\\_scripting#Non-persistent](https://en.wikipedia.org/wiki/Cross_site_scripting#Non-persistent)

<http://www.nessus.org/u?ea9a0369>

<http://projects.webappsec.org/w/page/13246920/Cross%20Site%20Scripting>

### Solution

Restrict access to the vulnerable application. Contact the vendor for a patch or upgrade to address any cross-site scripting vulnerabilities.

### Risk Factor

Medium

```

## 11213 - HTTP TRACE / TRACK Methods Allowed

### Synopsis

Debugging functions are enabled on the remote web server.

### Description

The remote web server supports the TRACE and/or TRACK methods. TRACE and TRACK are HTTP methods that are used to debug web server connections.

### See Also

<http://www.nessus.org/u?e979b5cb>

<http://www.apacheweek.com/issues/03-01-24>

To disable these methods, add the following lines for each virtual host in your configuration file :

```
RewriteEngine on
RewriteCond %{REQUEST_METHOD} ^(TRACE|TRACK)
RewriteRule .* - [F]
```

Alternatively, note that Apache versions 1.3.34, 2.0.55, and 2.2 support disabling the TRACE method natively via the 'TraceEnable' directive.

## 139915 - ISC BIND 9.x < 9.11.22, 9.12.x < 9.16.6, 9.17.x < 9.17.4 DoS

### Synopsis

The remote name server is affected by a denial of service vulnerability.

### Description

According to its self-reported version number, the installation of ISC BIND running on the remote name server is version 9.x prior to 9.11.22, 9.12.x prior to 9.16.6 or 9.17.x prior to 9.17.4. It is, therefore, affected by a denial of service (DoS) vulnerability due to an assertion failure when attempting to verify a truncated response to a TSIG-signed request. An authenticated, remote attacker can exploit this issue by sending a truncated response to a TSIG-signed request to trigger an assertion failure, causing the server to exit.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://kb.isc.org/docs/cve-2020-8622>

### Solution

Upgrade to BIND 9.11.22, 9.16.6, 9.17.4 or later.

## 136808 - ISC BIND Denial of Service

### Synopsis

The remote name server is affected by an assertion failure vulnerability.

### Description

A denial of service (DoS) vulnerability exists in ISC BIND versions 9.11.18 / 9.11.18-S1 / 9.12.4-P2 / 9.13 / 9.14.11 / 9.15 / 9.16.2 / 9.17 / 9.17.1 and earlier. An unauthenticated, remote attacker can exploit this issue, via a specially-crafted message, to cause the service to stop responding.

Note that Nessus has not tested for this issue but has instead relied only on the application's self-reported version number.

### See Also

<https://kb.isc.org/docs/cve-2020-8617>

### Solution

Upgrade to the patched release most closely related to your current version of BIND.

### Risk Factor

Medium

### CVSS v3.0 Base Score

5.9 (CVSS:3.0/AV:N/AC:H/PR:N/UI:N/S:U/C:N/I:N/A:H)

## 46803 - PHP expose\_php Information Disclosure

### Synopsis

The configuration of PHP on the remote host allows disclosure of sensitive information.

### Description

The PHP install on the remote server is configured in a way that allows disclosure of potentially sensitive information to an attacker through a special URL. Such a URL triggers an Easter egg built into PHP itself.

Other such Easter eggs likely exist, but Nessus has not checked for them.

### See Also

[https://www.0php.com/php\\_easter\\_egg.php](https://www.0php.com/php_easter_egg.php)

<https://seclists.org/webappsec/2004/q4/324>

### Solution

In the PHP configuration file, `php.ini`, set the value for 'expose\_php' to 'Off' to disable this behavior. Restart the web server daemon to put this change into effect.

### Risk Factor

Medium

### CVSS v2.0 Base Score

### Plugin Output

tcp/80/www

Nessus was able to verify the issue using the following URL :

`http://192.168.50.150/dvwa/dvwa/includes/DBMS/DBMS.php/?=PHPB8B5F2A0-3C92-11d3-A3A9-4C7B08C10000`

## 57608 - SMB Signing not required

### Synopsis

---

Signing is not required on the remote SMB server.

### Description

---

Signing is not required on the remote SMB server. An unauthenticated, remote attacker can exploit this to conduct man-in-the-middle attacks against the SMB server.

### See Also

---

<http://www.nessus.org/u?df39b8b3>

<https://www.samba.org/samba/docs/current/man-html/smb.conf.5.html>

<http://www.nessus.org/u?a3cac4ea>

### Solution

---

Enforce message signing in the host's configuration. On Windows, this is found in the policy setting 'Microsoft network server: Digitally sign communications (always)'. On Samba, the setting is called 'server signing'. See the 'see also' links for further details.

## 52611 - SMTP Service STARTTLS Plaintext Command Injection

### Synopsis

The remote mail service allows plaintext command injection while negotiating an encrypted communications channel.

### Description

The remote SMTP service contains a software flaw in its STARTTLS implementation that could allow a remote, unauthenticated attacker to inject commands during the plaintext protocol phase that will be executed during the ciphertext protocol phase.

Successful exploitation could allow an attacker to steal a victim's email or associated SASL (Simple Authentication and Security Layer) credentials.

```
220 2.0.0 Ready to start TLS
```

```
250 2.0.0 Ok
```

## 51192 - SSL Certificate Cannot Be Trusted

### Synopsis

---

The SSL certificate for this service cannot be trusted.

### Description

---

The server's X.509 certificate cannot be trusted. This situation can occur in three different ways, in which the chain of trust can be broken, as stated below :

- First, the top of the certificate chain sent by the server might not be descended from a known public certificate authority. This can occur either when the top of the chain is an unrecognized, self-signed certificate, or when intermediate certificates are missing that would connect the top of the certificate chain to a known public certificate authority.
- Second, the certificate chain may contain a certificate that is not valid at the time of the scan. This can occur either when the scan occurs before one of the certificate's 'notBefore' dates, or after one of the certificate's 'notAfter' dates.
- Third, the certificate chain may contain a signature that either didn't match the certificate's information or could not be verified. Bad signatures can be fixed by getting the certificate with the bad signature to be re-signed by its issuer. Signatures that could not be verified are the result of the certificate's issuer using a signing algorithm that Nessus either does not support or does not recognize.

If the remote host is a public host in production, any break in the chain makes it more difficult for users to verify the authenticity and identity of the web server. This could make it easier to carry out man-in-the-middle attacks against the remote host.

192.168.50.150
```

```
The Common Name in the certificate is :
```

```
ubuntu804-base.localdomain
```

## 65821 - SSL RC4 Cipher Suites Supported (Bar Mitzvah)

### Synopsis

---

The remote service supports the use of the RC4 cipher.

### Description

---

The remote host supports the use of RC4 in one or more cipher suites.

The RC4 cipher is flawed in its generation of a pseudo-random stream of bytes so that a wide variety of small biases are introduced into the stream, decreasing its randomness.

If plaintext is repeatedly encrypted (e.g., HTTP cookies), and an attacker is able to obtain many (i.e., tens of millions) ciphertexts, the attacker may be able to derive the plaintext.

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	----	-----	---
RC4-SHA	0x00, 0x05	RSA	RSA	RC4 (128)	
SHA1					

The fields above are :

```
{Tenable ciphername}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 57582 - SSL Self-Signed Certificate

### Synopsis

The SSL certificate chain for this service ends in an unrecognized self-signed certificate.

### Description

The X.509 certificate chain for this service is not signed by a recognized certificate authority. If the remote host is a public host in production, this nullifies the use of SSL as anyone could establish a man-in-the-middle attack against the remote host.

Note that this plugin does not check for certificate chains that end in a certificate that is not self-signed, but is signed by an unrecognized certificate authority.

### Solution

Purchase or generate a proper SSL certificate for this service.

### Risk Factor

Medium

### CVSS v3.0 Base Score

6.5 (CVSS:3.0/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:L/A:N)

### Plugin Output

tcp/5432/postgresql

The following certificate was found at the top of the certificate chain sent by the remote host, but is self-signed and was not found in the list of known certificate authorities :

```
| -Subject : C=XX/ST=There is no such thing outside US/L=Everywhere/O=OCOSA/OU=Office for  
Complication of Otherwise Simple Affairs/CN=ubuntu804-base.localdomain/E=root@ubuntu804-  
base.localdomain
```

## 104743 - TLS Version 1.0 Protocol Detection

### Synopsis

The remote service encrypts traffic using an older version of TLS.

### Description

The remote service accepts connections encrypted using TLS 1.0. TLS 1.0 has a number of cryptographic design flaws. Modern implementations of TLS 1.0 mitigate these problems, but newer versions of TLS like 1.2 and 1.3 are designed against these flaws and should be used whenever possible.

As of March 31, 2020, Endpoints that aren't enabled for TLS 1.2 and higher will no longer function properly with major web browsers and major vendors.

PCI DSS v3.2 requires that TLS 1.0 be disabled entirely by June 30, 2018, except for POS POI terminals (and the SSL/TLS termination points to which they connect) that can be verified as not being susceptible to any known exploits.

### See Also

<https://tools.ietf.org/html/draft-ietf-tls-oldversions-deprecate-00>

### Solution

Enable support for TLS 1.2 and 1.3, and disable support for TLS 1.0.

### Risk Factor

Medium

## 35806 - Tomcat Sample App cal2.jsp 'time' Parameter XSS

### Synopsis

The remote web server contains a JSP application that is affected by a cross-site scripting vulnerability.

### Description

The remote web server includes an example JSP application, 'cal2.jsp', that fails to sanitize user-supplied input before using it to generate dynamic content. An unauthenticated, remote attacker can exploit this issue to inject arbitrary HTML or script code into a user's browser to be executed within the security context of the affected site.

<http://tomcat.apache.org/security-6.html>

<http://tomcat.apache.org/security-5.html>

<http://tomcat.apache.org/security-4.html>

### Solution

Upgrade to Apache Tomcat version 4.1.40 / 5.5.28 / 6.0.20.

Alternatively, apply the appropriate patch referenced in the vendor advisory or undeploy the Tomcat examples web application.

### Risk Factor

Medium

### CVSS v3.0 Base Score

```

## 85582 - Web Application Potentially Vulnerable to Clickjacking

### Synopsis

---

The remote web server may fail to mitigate a class of web application vulnerabilities.

### Description

---

The remote web server does not set an X-Frame-Options response header or a Content-Security-Policy 'frame-ancestors' response header in all content responses. This could potentially expose the site to a clickjacking or UI redress attack, in which an attacker can trick a user into clicking an area of the vulnerable page that is different than what the user perceives the page to be. This can result in a user performing fraudulent or malicious transactions.

X-Frame-Options has been proposed by Microsoft as a way to mitigate clickjacking attacks and is currently supported by all major browser vendors.

Content-Security-Policy (CSP) has been proposed by the W3C Web Application Security Working Group, with increasing support among all major browser vendors, as a way to mitigate clickjacking and other attacks. The 'frame-ancestors' policy directive restricts which sources can embed the protected resource.

Note that while the X-Frame-Options and Content-Security-Policy response headers are not the only mitigations for clickjacking, they are currently the most reliable methods that can be detected through automation. Therefore, this plugin may produce false positives if other mitigation strategies (e.g., frame-busting JavaScript) are deployed or if the page does not perform any security-sensitive transactions.

### See Also

---

<http://www.nessus.org/u?399b1f56>

<https://en.wikipedia.org/wiki/Clickjacking>

### Solution

---

Return the X-Frame-Options or Content-Security-Policy (with the 'frame-ancestors' directive) HTTP header with the page's response.

This prevents the page's content from being rendered by another site when using the frame or iframe HTML tags.

### Risk Factor

## 11229 - Web Server info.php / phpinfo.php Detection

### Synopsis

The remote web server contains a PHP script that is prone to an information disclosure attack.

### Description

Many PHP installation tutorials instruct the user to create a PHP file that calls the PHP function 'phpinfo()' for debugging purposes. Various PHP applications may also include such a file. By accessing such a file, a remote attacker can discover a large amount of information about the remote web server, including :

- The username of the user who installed PHP and if they are a SUDO user.
- The IP address of the host.
- The version of the operating system.
- The web server version.
- The root directory of the web server.
- Configuration information about the remote PHP installation.

### Solution

Remove the affected file(s).

### Risk Factor

Medium

### Plugin Output

tcp/80/www

Nessus discovered the following URLs that call phpinfo() :

- http://192.168.50.150/phpinfo.php

- <http://192.168.50.150/mutillidae/phpinfo.php>

## 51425 - phpMyAdmin error.php BBcode Tag XSS (PMASA-2010-9)

### Synopsis

The remote web server hosts a PHP script that is prone to a cross- site scripting attack.

### Description

The version of phpMyAdmin fails to validate BBcode tags in user input to the 'error' parameter of the 'error.php' script before using it to generate dynamic HTML.

An attacker may be able to leverage this issue to inject arbitrary HTML or script code into a user's browser to be executed within the security context of the affected site. For example, this could be used to cause a page with arbitrary text and a link to an external site to be displayed.

```

## 36083 - phpMyAdmin file\_path Parameter Vulnerabilities (PMASA-2009-1)

### Synopsis

The remote web server contains a PHP script that is affected by multiple issues.

### Description

The version of phpMyAdmin installed on the remote host fails to sanitize user-supplied input to the 'file\_path' parameter of the 'bs\_disp\_as\_mime\_type.php' script before using it to read a file and reporting it in dynamically-generated HTML. An unauthenticated, remote attacker may be able to leverage this issue to read arbitrary files, possibly from third-party hosts, or to inject arbitrary HTTP headers in responses sent to third-party users.

Note that the application is also reportedly affected by several other issues, although Nessus has not actually checked for them.

### See Also

## 49142 - phpMyAdmin setup.php Verbose Server Name XSS (PMASA-2010-7)

### Synopsis

The remote web server contains a PHP application that has a cross- site scripting vulnerability.

### Description

The setup script included with the version of phpMyAdmin installed on the remote host does not properly sanitize user-supplied input to the 'verbose server name' field.

A remote attacker could exploit this by tricking a user into executing arbitrary script code.

By making a series of requests, Nessus was able to determine the following phpMyAdmin installation is vulnerable :

<http://192.168.50.150/phpMyAdmin/>

## 10114 - ICMP Timestamp Request Remote Date Disclosure

### Synopsis

It is possible to determine the exact time set on the remote host.

### Description

The remote host answers to an ICMP timestamp request. This allows an attacker to know the date that is set on the targeted machine, which may assist an unauthenticated, remote attacker in defeating time-based authentication protocols.

Timestamps returned from machines running Windows Vista / 7 / 2008 / 2008 R2 are deliberately incorrect, but usually within 1000 seconds of the actual system time.

### Solution

Filter out the ICMP timestamp requests (13), and the outgoing ICMP timestamp replies (14).

### Risk Factor

Low

### VPR Score

2.2

### EPSS Score

0.8939

### CVSS v2.0 Base Score

### Plugin Output

icmp/0

The difference between the local and remote clocks is 605 seconds.

## 78479 - SSLv3 Padding Oracle On Downgraded Legacy Encryption Vulnerability (POODLE)

### Synopsis

---

It is possible to obtain sensitive information from the remote host with SSL/TLS-enabled services.

### Description

---

The remote host is affected by a man-in-the-middle (MitM) information disclosure vulnerability known as POODLE. The vulnerability is due to the way SSL 3.0 handles padding bytes when decrypting messages encrypted using block ciphers in cipher block chaining (CBC) mode.

MitM attackers can decrypt a selected byte of a cipher text in as few as 256 tries if they are able to force a victim application to repeatedly send the same data over newly created SSL 3.0 connections.

As long as a client and service both support SSLv3, a connection can be 'rolled back' to SSLv3, even if TLSv1 or newer is supported by the client and service.

The TLS Fallback SCSV mechanism prevents 'version rollback' attacks without impacting legacy clients; however, it can only protect connections when the client and service support the mechanism. Sites that cannot disable SSLv3 immediately should enable this mechanism.

This is a vulnerability in the SSLv3 specification, not in any particular SSL implementation. Disabling SSLv3 is the only way to completely mitigate the vulnerability.

### See Also

---

<https://www.imperialviolet.org/2014/10/14/poodle.html>

<https://www.openssl.org/~bodo/ssl-poodle.pdf>

<https://tools.ietf.org/html/draft-ietf-tls-downgrade-scsv-00>

### Solution

---

Disable SSLv3.

Services that must support SSLv3 should enable the TLS Fallback SCSV mechanism until SSLv3 can be disabled.

### Risk Factor

---

Medium

### CVSS v3.0 Base Score

---

3.4 (CVSS:3.0/AV:N/AC:H/PR:N/UI:R/S:C/C:L/I:N/A:N)

CVE	CVE-2014-3566
XREF	CERT:577193

## Plugin Information

---

Published: 2014/10/15, Modified: 2023/06/23

## Plugin Output

---

tcp/5432/postgresql

Nessus determined that the remote server supports SSLv3 with at least one CBC cipher suite, indicating that this server is vulnerable.

It appears that TLSv1 or newer is supported on the server. However, the Fallback SCSV mechanism is not supported, allowing connections to be "rolled back" to SSLv3.

## 42057 - Web Server Allows Password Auto-Completion

### Synopsis

The 'autocomplete' attribute is not disabled on password fields.

### Description

The remote web server contains at least one HTML form field that has an input of type 'password' where 'autocomplete' is not set to 'off'.

While this does not represent a risk to this web server per se, it does mean that users who use the affected forms may have their credentials saved in their browsers, which could in turn lead to a loss of confidentiality if any of them use a shared host or if their machine is compromised at some point.

### Solution

Add the attribute 'autocomplete=off' to these fields to prevent browsers from caching credentials.

### Risk Factor

Low

### Plugin Information

tcp/8180/www

The following web pages use Basic Authentication over an unencrypted channel :

```
/host-manager/html:/ realm="Tomcat Host Manager Application"  
/manager/html:/ realm="Tomcat Manager Application"  
/manager/status:/ realm="Tomcat Manager Application"
```

## 10407 - X Server Detection

### Synopsis

An X11 server is listening on the remote host

### Description

The remote host is running an X11 server. X11 is a client-server protocol that can be used to display graphical applications running on a given host on a remote client.

Since the X11 traffic is not ciphered, it is possible for an attacker to eavesdrop on the connection.

### Solution

Restrict access to this port. If the X11 client/server facility is not used, disable TCP support in X11 entirely (-nolisten tcp).

### Risk Factor

Low

## 21186 - AJP Connector Detection

### Synopsis

There is an AJP connector listening on the remote host.

### Description

The remote host is running an AJP (Apache JServ Protocol) connector, a service by which a standalone web server such as Apache communicates over TCP with a Java servlet container such as Tomcat.

### See Also

<http://tomcat.apache.org/connectors-doc/>

<http://tomcat.apache.org/connectors-doc/ajp/ajpv13a.html>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2006/04/05, Modified: 2019/11/22

### Plugin Output

tcp/8009/ajp13

The connector listing on this port supports the ajp13 protocol.

## 18261 - Apache Banner Linux Distribution Disclosure

### Synopsis

The name of the Linux distribution running on the remote host was found in the banner of the web server.

### Description

Nessus was able to extract the banner of the Apache web server and determine which Linux distribution the remote host is running.

### Solution

If you do not wish to display this information, edit 'httpd.conf' and set the directive 'ServerTokens Prod' and restart Apache.

### Risk Factor

None

### Plugin Information

Published: 2005/05/15, Modified: 2022/03/21

### Plugin Output

tcp/0

```
The Linux distribution detected was :  
- Ubuntu 8.04 (gutsy)
```

## 48204 - Apache HTTP Server Version

### Synopsis

It is possible to obtain the version number of the remote Apache HTTP server.

### Description

The remote host is running the Apache HTTP Server, an open source web server. It was possible to read the version number from the banner.

### See Also

<https://httpd.apache.org/>

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0030

XREF IAVT:0001-T-0530

### Plugin Information

### Plugin Output

tcp/80/www

```
URL      : http://192.168.50.150/
Version  : 2.2.99
Source   : Server: Apache/2.2.8 (Ubuntu) DAV/2
backported : 1
modules  : DAV/2
os       : ConvertedUbuntu
```

## 39446 - Apache Tomcat Detection

### Synopsis

The remote web server is an Apache Tomcat server.

### Description

Nessus was able to detect a remote Apache Tomcat web server.

### See Also

<https://tomcat.apache.org/>

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0535

### Plugin Information

### Plugin Output

tcp/8180/www

```
URL      : http://192.168.50.150:8180/
Version  : 5.5
backported : 0
source    : Apache Tomcat/5.5
```

## 84574 - Backported Security Patch Detection (PHP)

### Synopsis

Security patches have been backported.

### Description

Security patches may have been 'backported' to the remote PHP install without changing its version number.

Banner-based checks have been disabled to avoid false positives.

Note that this test is informational only and does not denote any security problem.

### See Also

### Risk Factor

None

### Plugin Information

Published: 2015/07/07, Modified: 2024/11/22

### Plugin Output

tcp/80/www

```
Give Nessus credentials to perform local checks.
```

## 47830 - CGI Generic Injectable Parameter

### Synopsis

Some CGIs are candidate for extended injection tests.

### Description

Nessus was able to inject innocuous strings into CGI parameters and read them back in the HTTP response.

The affected parameters are candidates for extended injection tests like cross-site scripting attacks.

This is not a weakness per se, the main purpose of this test is to speed up other scripts. The results may be useful for a human pen-tester.

### Solution

n/a

### Risk Factor

None

### References

XREF           CWE:86

### Plugin Information

Published: 2010/07/26, Modified: 2021/01/19

### Plugin Output

tcp/80/www

```
Using the GET HTTP method, Nessus found that :

+ The following resources may be vulnerable to injectable parameter :

+ The 'topic' parameter of the /twiki/bin/view/Main/WebHome CGI :

/twiki/bin/view/Main/WebHome?topic=%00avpslw

----- output -----
<html xmlns="http://www.w3.org/1999/xhtml" xml:lang="en" lang="en">
<head>
<title> TWiki . Main . avpslw </title>
<meta http-equiv="Content-Type" content="text/html; charset=ISO-88 [...]
<base href="http://192.168.50.150/twiki/bin/view/Main/avpslw" />
-----

+ The 'search' parameter of the /twiki/bin/search/Main/SearchResult CGI :
```

```

/twiki/bin/search/Main/SearchResult?search=%00avpslw

----- output -----
</tr>
</table>
</form>Search: <b> !avpslw </b>
<p /><table width="100%" border="0" cellpadding="0" cellspacing="4">
<tr bgcolor="#FFFC0">
-----

+ The 'template' parameter of the /twiki/bin/oops/Main/WebHomemailto:webmasteryour/company CGI :

/twiki/bin/oops/Main/WebHomemailto:webmasteryour/company?template=%00avp
slw

----- output -----
<html><body>
<h1>TWiki Installation Error</h1>
Template file .avpslw.tmp1 not found or template directory
/var/www/twiki/templates not found.<p />
Check the $templateDir variable in TWiki.cfg.
-----

+ The 'page' parameter of the /mutillidae/ CGI :

/mutillidae/?page=%00avpslw

----- output -----
<a href="./index.php?page=login.php">Login/Register</a>
</td>

http://192.168.50.150/twiki/bin/search/Main/SearchResult?search=%00avpslw
http://192.168.50.150/mutillidae/?page=%00avpslw

```

## 33817 - CGI Generic Tests Load Estimation (all tests)

### Synopsis

Load estimation for web application tests.

### Description

This script computes the maximum number of requests that would be done by the generic web tests, depending on miscellaneous options. It does not perform any test by itself.

The results can be used to estimate the duration of these tests, or the complexity of additional manual tests.

Note that the script does not try to compute this duration based on external factors such as the network and web servers loads.

### Solution

n/a

### Risk Factor

None

### Plugin Information

## 10028 - DNS Server BIND version Directive Remote Version Detection

### Synopsis

It is possible to obtain the version number of the remote DNS server.

### Description

The remote host is running BIND or another DNS server that reports its version number when it receives a special request for the text 'version.bind' in the domain 'chaos'.

This version is not necessarily accurate and could even be forged, as some DNS servers send the information based on a configuration file.

### Solution

It is possible to hide the version number of BIND by using the 'version' directive in the 'options' section in named.conf.

### Risk Factor

None

### References

XREF IAVT:0001-T-0583

### Plugin Information

Published: 1999/10/12, Modified: 2022/10/12

### Plugin Output

udp/53/dns

```
Version : 9.4.2
```

## 11002 - DNS Server Detection

### Synopsis

---

A DNS server is listening on the remote host.

### Description

---

The remote service is a Domain Name System (DNS) server, which provides a mapping between hostnames and IP addresses.

### See Also

---

[https://en.wikipedia.org/wiki/Domain\\_Name\\_System](https://en.wikipedia.org/wiki/Domain_Name_System)

### Solution

---

Disable this service if it is not needed or restrict access to internal hosts only if the service is available externally.

### Risk Factor

---

None

### Plugin Information

---

Published: 2003/02/13, Modified: 2017/05/16

### Plugin Output

---

tcp/53/dns

## 72779 - DNS Server Version Detection

### Synopsis

Nessus was able to obtain version information on the remote DNS server.

### Description

Nessus was able to obtain version information by sending a special TXT record query to the remote host.

Note that this version is not necessarily accurate and could even be forged, as some DNS servers send the information based on a configuration file.

### Solution

n/a

### Risk Factor

None

### References

### Plugin Output

tcp/53/dns

```
DNS server answer for "version.bind" (over TCP) :
```

```
9.4.2
```

## 35371 - DNS Server hostname.bind Map Hostname Disclosure

### Synopsis

The DNS server discloses the remote host name.

### Description

It is possible to learn the remote host name by querying the remote DNS server for 'hostname.bind' in the CHAOS domain.

### Solution

It may be possible to disable this feature. Consult the vendor's documentation for more information.

### Risk Factor

None

### Plugin Information

Published: 2009/01/15, Modified: 2011/09/14

### Plugin Output

udp/53/dns

```
The remote host name is :  
metasploitable
```

## 54615 - Device Type

### Synopsis

It is possible to guess the remote device type.

### Description

Based on the remote operating system, it is possible to determine what the remote system type is (eg: a printer, router, general-purpose computer, etc).

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/05/23, Modified: 2022/09/09

```
The following card manufacturers were identified :
```

```
08:00:27:4D:42:0A : PCS Systemtechnik GmbH
```

## 86420 - Ethernet MAC Addresses

### Synopsis

This plugin gathers MAC addresses from various sources and consolidates them into a list.

### Description

This plugin gathers MAC addresses discovered from both remote probing of the host (e.g. SNMP and Netbios) and from running local checks (e.g. ifconfig). It then consolidates the MAC addresses into a single, unique, and uniform list.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2015/10/16, Modified: 2020/05/13

### Plugin Output

tcp/0

```

tcp/21/ftp

```
The remote FTP banner is :
```

```
220 (vsFTPd 2.3.4)
```

## 43111 - HTTP Methods Allowed (per directory)

### Synopsis

This plugin determines which HTTP methods are allowed on various CGI directories.

### Description

By calling the OPTIONS method, it is possible to determine which HTTP methods are allowed on each directory.

The following HTTP methods are considered insecure:

PUT, DELETE, CONNECT, TRACE, HEAD

Many frameworks and languages treat 'HEAD' as a 'GET' request, albeit one without any body in the response. If a security constraint was set on 'GET' requests such that only 'authenticatedUsers' could access GET requests for a particular servlet or resource, it would be bypassed for the 'HEAD' version. This allowed unauthorized blind submission of any privileged GET request.

As this list may be incomplete, the plugin also tests - if 'Thorough tests' are enabled or 'Enable web applications tests' is set to 'yes'

in the scan policy - various known HTTP methods on each directory and considers them as unsupported if it receives a response code of 400, 403, 405, or 501.

Note that the plugin output is only informational and does not necessarily indicate the presence of any security vulnerabilities.

## 43111 - HTTP Methods Allowed (per directory)

### Synopsis

This plugin determines which HTTP methods are allowed on various CGI directories.

### Description

By calling the OPTIONS method, it is possible to determine which HTTP methods are allowed on each directory.

The following HTTP methods are considered insecure:

PUT, DELETE, CONNECT, TRACE, HEAD

Many frameworks and languages treat 'HEAD' as a 'GET' request, albeit one without any body in the response. If a security constraint was set on 'GET' requests such that only 'authenticatedUsers' could access GET requests for a particular servlet or resource, it would be bypassed for the 'HEAD' version. This allowed unauthorized blind submission of any privileged GET request.

As this list may be incomplete, the plugin also tests - if 'Thorough tests' are enabled or 'Enable web applications tests' is set to 'yes'

in the scan policy - various known HTTP methods on each directory and considers them as unsupported if it receives a response code of 400, 403, 405, or 501.

Note that the plugin output is only informational and does not necessarily indicate the presence of any security vulnerabilities.

### Plugin Output

tcp/8180/www

Based on the response to an OPTIONS request :

- HTTP methods DELETE HEAD OPTIONS POST PUT TRACE GET  
are allowed on :

```
/admin/error.jsp
/host-manager
/jsp-examples
/jsp-examples/cal
/jsp-examples/checkbox
/jsp-examples/colors
/jsp-examples/dates
/jsp-examples/error
/jsp-examples/forward
/jsp-examples/include
/jsp-examples/jsp2
/jsp-examples/jsp2/el
/jsp-examples/jsp2/jspattribute
/jsp-examples/jsp2/jsp
/jsp-examples/jsp2/misc
/servlets-examples
```

Based on tests of each method :

- HTTP methods GET HEAD OPTIONS POST are allowed on :

```
/
/admin
/admin/error.jsp
/host-manager
/jsp-examples
/jsp-examples/cal
/jsp-examples/checkbox
/jsp-examples/colors
/jsp-examples/dates
/jsp-examples/error
/jsp-examples/forward
/jsp-examples/include
/jsp-examples/jsp2
/jsp-examples/jsp2/el
/jsp-examples/jsp2/jspattribute
/jsp-examples/jsp2/jsp
/jsp-examples/jsp2/misc
/servlets-examples
```

## 10107 - HTTP Server Type and Version

### Synopsis

A web server is running on the remote host.

### Description

This plugin attempts to determine the type and the version of the remote web server.

### Solution

The remote web server type is :  
Apache-Coyote/1.1
```

## 24260 - HyperText Transfer Protocol (HTTP) Information

## Synopsis

Some information about the remote HTTP configuration can be extracted.

Description
-------------

This test gives some information about the remote HTTP protocol - the version used, whether HTTP Keep-Alive is enabled, etc...

This test is informational only and does not denote any security problem.

### Solution

n/a

Risk Factor	Impact	Control
1. Lack of industry connections	Reduced sales and market penetration	Networking and strategic partnerships
2. Limited marketing budget	Low brand awareness and visibility	Targeted digital marketing and social media
3. Intense competition	Price wars and reduced profit margins	Product differentiation and customer loyalty programs
4. Economic downturn	Reduced consumer spending and demand	Cost-cutting measures and flexible pricing
5. Technological obsolescence	Loss of competitive edge	Continuous R&D and innovation
6. Regulatory changes	Increased compliance costs and legal risks	Proactive legal counsel and industry engagement
7. Supply chain disruptions	Increased costs and delivery delays	Diversified suppliers and inventory management
8. Talent acquisition challenges	Reduced productivity and innovation	Competitive compensation and employee development
9. Poor timing of product launch	Missed market opportunities	Thorough market research and timing analysis
10. Inconsistent quality control	Customer dissatisfaction and reputational damage	Strict quality assurance protocols

## 10397 - Microsoft Windows SMB LanMan Pipe Server Listing Disclosure

### Synopsis

It is possible to obtain network information.

### Description

It was possible to obtain the browse list of the remote Windows system by sending a request to the LANMAN pipe. The browse list is the list of the nearest Windows systems of the remote host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2000/05/09, Modified: 2022/02/01

### Plugin Output

tcp/445/cifs

```
Here is the browse list of the remote host :
```

```
METASPLOITABLE ( os : 0.0 )
```

## 10785 - Microsoft Windows SMB NativeLanManager Remote System Information Disclosure

### Synopsis

It was possible to obtain information about the remote operating system.

### Description

Nessus was able to obtain the remote operating system name and version (Windows and/or Samba) by sending an authentication request to port 139 or 445. Note that this plugin requires SMB to be enabled on the host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2001/10/17, Modified: 2021/09/20

### Plugin Output

tcp/445/cifs

```
The remote Operating System is : Unix
The remote native LAN manager is : Samba 3.0.20-Debian
The remote SMB Domain Name is : METASPLOITABLE
```

## 11011 - Microsoft Windows SMB Service Detection

### Synopsis

A file / print sharing service is listening on the remote host.

### Description

The remote service understands the CIFS (Common Internet File System) or Server Message Block (SMB) protocol, used to provide shared access to files, printers, etc between nodes on a network.

### Solution

The remote host does NOT support the following SMB dialects :
_version_  _introduced in windows version_
2.0.2      Windows 2008
2.1        Windows 7
2.2.2      Windows 8 Beta
2.2.4      Windows 8 Beta
3.0        Windows 8
3.0.2      Windows 8.1
3.1        Windows 10
3.1.1      Windows 10
```

## 50344 - Missing or Permissive Content-Security-Policy frame-ancestors HTTP Response Header

### Synopsis

The remote web server does not take steps to mitigate a class of web application vulnerabilities.

### Description

The remote web server in some responses sets a permissive Content-Security-Policy (CSP) frame-ancestors response header or does not set one at all.

The CSP frame-ancestors header has been proposed by the W3C Web Application Security Working Group as a way to mitigate cross-site scripting and clickjacking attacks.

## 50345 - Missing or Permissive X-Frame-Options HTTP Response Header

### Synopsis

The remote web server does not take steps to mitigate a class of web application vulnerabilities.

### Description

The remote web server in some responses sets a permissive X-Frame-Options response header or does not set one at all.

The X-Frame-Options header has been proposed by Microsoft as a way to mitigate clickjacking attacks and is currently supported by all major browser vendors

### See Also

<https://en.wikipedia.org/wiki/Clickjacking>

<http://www.nessus.org/u?399b1f56>

### Solution

Set a properly configured X-Frame-Options header for all requested resources.

### Risk Factor

None

### Plugin Information

Published: 2010/10/26, Modified: 2021/01/19

### Plugin Output

tcp/80/www

## 10437 - NFS Share Export List

### Synopsis

The remote NFS server exports a list of shares.

### Description

This plugin retrieves the list of NFS exported shares.

### See Also

<http://www.tldp.org/HOWTO/NFS-HOWTO/security.html>

### Solution

Ensure each share is intended to be exported.

### Risk Factor

None

### Plugin Information

Published: 2000/06/07, Modified: 2019/10/04

### Plugin Output

tcp/2049/rpc-nfs

```
Here is the export list of 192.168.50.150 :  
  
/ *
```

### Synopsis

---

It is possible to determine which TCP ports are open.

### Description

---

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

### Solution

---

Protect your target with an IP filter.

### Risk Factor

---

None

### Plugin Information

---

Published: 2009/02/04, Modified: 2024/12/30

### Plugin Output

---

tcp/21/ftp

```
Port 21/tcp was found to be open
```

### Synopsis

---

It is possible to determine which TCP ports are open.

### Description

---

This plugin is a SYN 'half-open' port scanner. It shall be reasonably quick even against a firewalled target.

Note that SYN scans are less intrusive than TCP (full connect) scans against broken services, but they might cause problems for less robust firewalls and also leave unclosed connections on the remote target, if the network is loaded.

### Solution

---

Protect your target with an IP filter.

### Risk Factor

---

None

### Plugin Information

tcp/8787

```
Port 8787/tcp was found to be open
```

## 11936 - OS Identification

### Synopsis

It is possible to guess the remote operating system.

### Description

Using a combination of remote probes (e.g., TCP/IP, SMB, HTTP, NTP, SNMP, etc.), it is possible to guess the name of the remote operating system in use. It is also possible sometimes to guess the version of the operating system.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2003/12/09, Modified: 2024/10/14

### Plugin Output

tcp/0

```
Remote operating system : Linux Kernel 2.6 on Ubuntu 8.04 (gutsy)
Confidence level : 95
Method : HTTP
```

```
The remote host is running Linux Kernel 2.6 on Ubuntu 8.04 (gutsy)
```

## 181418 - OpenSSH Detection

### Synopsis

An OpenSSH-based SSH server was detected on the remote host.

### Description

An OpenSSH-based SSH server was detected on the remote host.

### See Also

<https://www.openssh.com/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2023/09/14, Modified: 2024/12/30

### Plugin Output

tcp/22/ssh

```
Service : ssh
Version : 4.7p1
Banner  : SSH-2.0-OpenSSH_4.7p1 Debian-8ubuntu1
```

## 50845 - OpenSSL Detection

### Synopsis

The remote service appears to use OpenSSL to encrypt traffic.

### Description

Based on its response to a TLS request with a specially crafted server name extension, it seems that the remote service is using the OpenSSL library to encrypt traffic.

Note that this plugin can only detect OpenSSL implementations that have enabled support for TLS extensions (RFC 4366).

### Plugin Output

tcp/5432/postgresql

## 48243 - PHP Version Detection

### Synopsis

It was possible to obtain the version number of the remote PHP installation.

### Description

Nessus was able to determine the version of PHP available on the remote web server.

### Solution

n/a

### Risk Factor

None

### References

XREF IAVT:0001-T-0936

### Plugin Information

Published: 2010/08/04, Modified: 2024/11/22

### Plugin Output

tcp/80/www

Nessus was able to identify the following PHP version information :

```
Version : 5.2.4-2ubuntu5.10
Source  : X-Powered-By: PHP/5.2.4-2ubuntu5.10
Source  : http://192.168.50.150/phpinfo.php
```

## 118224 - PostgreSQL STARTTLS Support

### Synopsis

The remote service supports encrypting traffic.

### Description

The remote PostgreSQL server supports the use of encryption initiated during pre-login to switch from a cleartext to an encrypted communications channel.

### See Also

<https://www.postgresql.org/docs/9.2/protocol-flow.html#AEN96066>

## 26024 - PostgreSQL Server Detection

### Synopsis

A database service is listening on the remote host.

### Description

The remote service is a PostgreSQL database server, or a derivative such as EnterpriseDB.

### See Also

<https://www.postgresql.org/>

### Solution

Limit incoming traffic to this port if desired.

### Risk Factor

None

### Plugin Information

Published: 2007/09/14, Modified: 2023/05/24

### Plugin Output

tcp/5432/postgresql

## 40665 - Protected Web Page Detection

### Synopsis

Some web pages require authentication.

### Description

The remote web server requires HTTP authentication for the following pages. Several authentication schemes are available :

- Basic is the simplest, but the credentials are sent in cleartext.
- NTLM provides an SSO in a Microsoft environment, but it cannot be used on both the proxy and the web server. It is also weaker than Digest.
- Digest is a cryptographically strong scheme. Credentials are never sent in cleartext, although they may still be cracked by a dictionary attack.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2009/08/21, Modified: 2016/10/04

### Plugin Output

tcp/8180/www

The following pages are protected by the Basic authentication scheme :

```
/host-manager/html  
/manager/html  
/manager/status
```

## 22227 - RMI Registry Detection

### Synopsis

An RMI registry is listening on the remote host.

### Description

The remote host is running an RMI registry, which acts as a bootstrap naming service for registering and retrieving remote objects with simple names in the Java Remote Method Invocation (RMI) system.

### See Also

### Plugin Output

tcp/22/ssh

```
SSH version : SSH-2.0-OpenSSH_4.7p1 Debian-8ubuntu1
SSH supported authentication : publickey,password
```

## 56984 - SSL / TLS Versions Supported

### Synopsis

The remote service encrypts communications.

### Description

This plugin detects which SSL and TLS versions are supported by the remote service for encrypting communications.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/12/01, Modified: 2023/07/10

### Plugin Output

tcp/5432/postgresql

```
This port supports SSLv3/TLSv1.0.
```

## 45410 - SSL Certificate 'commonName' Mismatch

### Synopsis

The 'commonName' (CN) attribute in the SSL certificate does not match the hostname.

### Description

The service running on the remote host presents an SSL certificate for which the 'commonName' (CN) attribute does not match the hostname on which the service listens.

### Solution

If the machine has several names, make sure that users connect to the service through the DNS hostname that matches the common name in the certificate.

### Risk Factor

None

### Plugin Information

## 70544 - SSL Cipher Block Chaining Cipher Suites Supported

### Synopsis

The remote service supports the use of SSL Cipher Block Chaining ciphers, which combine previous blocks with subsequent ones.

### Description

The remote host supports the use of SSL ciphers that operate in Cipher Block Chaining (CBC) mode. These cipher suites offer additional security over Electronic Codebook (ECB) mode, but have the potential to leak information if used improperly.

Published: 2013/10/22, Modified: 2021/02/03

### Plugin Output

tcp/5432/postgresql

Here is the list of SSL CBC ciphers supported by the remote server :

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	----	-----	---
EDH-RSA-DES-CBC3-SHA	0x00, 0x16	DH	RSA	3DES-CBC (168)	
SHA1					
DES-CBC3-SHA	0x00, 0x0A	RSA	RSA	3DES-CBC (168)	
SHA1					

High Strength Ciphers (>= 112-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	----	-----	---
DHE-RSA-AES128-SHA	0x00, 0x33	DH	RSA	AES-CBC (128)	
SHA1					

DHE-RSA-AES256-SHA	0x00, 0x39	DH	RSA	AES-CBC(256)
SHA1				
AES128-SHA	0x00, 0x2F	RSA	RSA	AES-CBC(128)
SHA1				
AES256-SHA	0x00, 0x35	RSA	RSA	AES-CBC(256)
SHA1				

The fields above are :

```
{Tenable ciphername}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 21643 - SSL Cipher Suites Supported

### Synopsis

The remote service encrypts communications using SSL.

### Description

This plugin detects which SSL ciphers are supported by the remote service for encrypting communications.

### See Also

<https://www.openssl.org/docs/man1.0.2/man1/ciphers.html>

### Plugin Output

tcp/5432/postgresql

Here is the list of SSL ciphers supported by the remote server :  
Each group is reported per SSL Version.

SSL Version : TLSv1

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	---	-----	---
EDH-RSA-DES-CBC3-SHA	0x00, 0x16	DH	RSA	3DES-CBC (168)	
SHA1					
DES-CBC3-SHA	0x00, 0x0A	RSA	RSA	3DES-CBC (168)	
SHA1					

High Strength Ciphers (>= 112-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	---	-----	---
DHE-RSA-AES128-SHA	0x00, 0x33	DH	RSA	AES-CBC (128)	
SHA1					
DHE-RSA-AES256-SHA	0x00, 0x39	DH	RSA	AES-CBC (256)	
SHA1					
AES128-SHA	0x00, 0x2F	RSA	RSA	AES-CBC (128)	
SHA1					

AES256-SHA	0x00, 0x35	RSA	RSA	AES-CBC(256)
SHA1				
RC4-SHA	0x00, 0x05	RSA	RSA	RC4(128)
SHA1				

SSL Version : SSLv3

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	----	-----	---
EDH-RSA-DES-CBC3-SHA	0x00, 0x16	DH	RSA	3DES-CBC(168)	
SHA1					
DES-CBC3-SHA	0x00, 0x0A	RSA	RSA	3DES-CBC(168)	
SHA1					

High Strength Ciphers (>= 112-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	---	[...]		

## 57041 - SSL Perfect Forward Secrecy Cipher Suites Supported

### Synopsis

The remote service supports the use of SSL Perfect Forward Secrecy ciphers, which maintain confidentiality even if the key is stolen.

### Description

The remote host supports the use of SSL ciphers that offer Perfect Forward Secrecy (PFS) encryption. These cipher suites ensure that recorded SSL traffic cannot be broken at a future date if the server's private key is compromised.

### See Also

<https://www.openssl.org/docs/manmaster/man1/ciphers.html>

### Plugin Output

tcp/5432/postgresql

Here is the list of SSL PFS ciphers supported by the remote server :

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

Name	Code	KEX	Auth	Encryption	MAC
EDH-RSA-DES-CBC3-SHA	0x00, 0x16	DH	RSA	3DES-CBC(168)	

SHA1

High Strength Ciphers (>= 112-bit key)

Name	Code	KEX	Auth	Encryption	MAC
DHE-RSA-AES128-SHA	0x00, 0x33	DH	RSA	AES-CBC(128)	
DHE-RSA-AES256-SHA	0x00, 0x39	DH	RSA	AES-CBC(256)	

SHA1

The fields above are :

```
{Tenable ciphername}  
{Cipher ID code}  
Kex={key exchange}  
Auth={authentication}  
Encrypt={symmetric encryption method}  
MAC={message authentication code}  
{export flag}
```

## 156899 - SSL/TLS Recommended Cipher Suites

### Synopsis

---

The remote host advertises discouraged SSL/TLS ciphers.

### Description

---

The remote host has open SSL/TLS ports which advertise discouraged cipher suites. It is recommended to only enable support for the following cipher suites:

TLSv1.3:

- 0x13,0x01 TLS13\_AES\_128\_GCM\_SHA256
- 0x13,0x02 TLS13\_AES\_256\_GCM\_SHA384
- 0x13,0x03 TLS13\_CHACHA20\_POLY1305\_SHA256

TLSv1.2:

- 0xC0,0x2B ECDHE-ECDSA-AES128-GCM-SHA256
- 0xC0,0x2F ECDHE-RSA-AES128-GCM-SHA256
- 0xC0,0x2C ECDHE-ECDSA-AES256-GCM-SHA384
- 0xC0,0x30 ECDHE-RSA-AES256-GCM-SHA384
- 0xCC,0xA9 ECDHE-ECDSA-CHACHA20-POLY1305
- 0xCC,0xA8 ECDHE-RSA-CHACHA20-POLY1305

This is the recommended configuration for the vast majority of services, as it is highly secure and compatible with nearly every client released in the last five (or more) years.

### See Also

---

[https://wiki.mozilla.org/Security/Server\\_Side\\_TLS](https://wiki.mozilla.org/Security/Server_Side_TLS)

<https://ssl-config.mozilla.org/>

### Solution

---

Only enable support for recommended cipher suites.

### Risk Factor

---

None

### Plugin Information

---

Published: 2022/01/20, Modified: 2024/02/12

### Plugin Output

---

tcp/5432/postgresql

The remote host has listening SSL/TLS ports which advertise the discouraged cipher suites outlined below:

Medium Strength Ciphers (> 64-bit and < 112-bit key, or 3DES)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	----	----	-----	----
EDH-RSA-DES-CBC3-SHA	0x00, 0x16	DH	RSA	3DES-CBC(168)	
SHA1					
DES-CBC3-SHA	0x00, 0x0A	RSA	RSA	3DES-CBC(168)	
SHA1					

High Strength Ciphers (>= 112-bit key)

Name	Code	KEX	Auth	Encryption	MAC
-----	-----	----	----	-----	----
DHE-RSA-AES128-SHA	0x00, 0x33	DH	RSA	AES-CBC(128)	
SHA1					
DHE-RSA-AES256-SHA	0x00, 0x39	DH	RSA	AES-CBC(256)	
SHA1					
AES128-SHA	0x00, 0x2F	RSA	RSA	AES-CBC(128)	
SHA1					
AES256-SHA	0x00, 0x35	RSA	RSA	AES-CBC(256)	
SHA1					
RC4-SHA	0x00, 0x05	RSA	RSA	RC4(128)	
SHA1					

The fields above are :

```
{Tenable ciphername}
{Cipher ID code}
Kex={key exchange}
Auth={authentication}
Encrypt={symmetric encryption method}
MAC={message authentication code}
{export flag}
```

## 25240 - Samba Server Detection

### Synopsis

An SMB server is running on the remote host.

### Description

The remote host is running Samba, a CIFS/SMB server for Linux and Unix.

### See Also

<https://www.samba.org/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2007/05/16, Modified: 2022/10/12

### Plugin Output

tcp/445/cifs

## 104887 - Samba Version

### Synopsis

It was possible to obtain the samba version from the remote operating system.

### Description

Nessus was able to obtain the samba version from the remote operating by sending an authentication request to port 139 or 445. Note that this plugin requires SMB1 to be enabled on the host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2017/11/30, Modified: 2019/11/22

### Plugin Output

tcp/445/cifs

```
The remote Samba Version is : Samba 3.0.20-Debian
```

## 96982 - Server Message Block (SMB) Protocol Version 1 Enabled (uncredentialed check)

### Synopsis

The remote Windows host supports the SMBv1 protocol.

### Description

The remote Windows host supports Server Message Block Protocol version 1 (SMBv1). Microsoft recommends that users discontinue the use of SMBv1 due to the lack of security features that were included in later SMB versions. Additionally, the Shadow Brokers group reportedly has an exploit that affects SMB; however, it is unknown if the exploit affects SMBv1 or another version. In response to this, US-CERT recommends that users disable SMBv1 per SMB best practices to mitigate these potential issues.

### See Also

<https://blogs.technet.microsoft.com/filecab/2016/09/16/stop-using-smb1/>

<https://support.microsoft.com/en-us/help/2696547/how-to-detect-enable-and-disable-smbv1-smbv2-and-smbv3-in-windows-and>

<http://www.nessus.org/u?8dcab5e4>

<http://www.nessus.org/u?234f8ef8>

<http://www.nessus.org/u?4c7e0cf3>

### Solution

Disable SMBv1 according to the vendor instructions in Microsoft KB2696547. Additionally, block SMB directly by blocking TCP port 445 on all network boundary devices. For SMB over the NetBIOS API, block TCP ports 137 / 139 and UDP ports 137 / 138 on all network boundary devices.

### Risk Factor

None

### References

tcp/6667/irc

```
An IRC daemon is listening on this port.
```

## 25220 - TCP/IP Timestamps Supported

### Synopsis

---

The remote service implements TCP timestamps.

### Description

---

The remote host implements TCP timestamps, as defined by RFC1323. A side effect of this feature is that the uptime of the remote host can sometimes be computed.

### See Also

---

### Plugin Output

---

tcp/0

## 11819 - TFTP Daemon Detection

### Synopsis

---

A TFTP server is listening on the remote port.

### Description

---

The remote host is running a TFTP (Trivial File Transfer Protocol) daemon. TFTP is often used by routers and diskless hosts to retrieve their configuration. It can also be used by worms to propagate.

### Solution

---

Disable this service if you do not use it.

### Risk Factor

---

None

### Plugin Information

---

Published: 2003/08/13, Modified: 2022/12/28

### Plugin Output

---

udp/69/tftp

## 19941 - TWiki Detection

### Synopsis

The remote web server hosts a Wiki system written in Perl.

### Description

The remote host is running TWiki, an open source wiki system written in Perl.

### See Also

<http://twiki.org>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/10/06, Modified: 2023/05/24

### Plugin Output

tcp/80/www

```
URL      : http://192.168.50.150/twiki/bin/view
Version  : 01 Feb 2003
```

## 10287 - Traceroute Information

### Synopsis

It was possible to obtain traceroute information.

### Description

Makes a traceroute to the remote host.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 1999/11/27, Modified: 2023/12/04

### Plugin Output

udp/0

```
For your information, here is the traceroute from 192.168.50.100 to 192.168.50.150 :
192.168.50.100
192.168.50.150
```

```
Hop Count: 1
```

## 19288 - VNC Server Security Type Detection

### Synopsis

A VNC server is running on the remote host.

### Description

This script checks the remote VNC server protocol version and the available 'security types'.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/07/22, Modified: 2021/07/13

### Plugin Output

tcp/5900/vnc

```
\n\nThe remote VNC server chose security type #2 (VNC authentication)
```

## 65792 - VNC Server Unencrypted Communication Detection

### Synopsis

A VNC server with one or more unencrypted 'security-types' is running on the remote host.

### Description

This script checks the remote VNC server protocol version and the available 'security types' to determine if any unencrypted 'security-types' are in use or available.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2013/04/03, Modified: 2014/03/12

### Plugin Output

tcp/5900/vnc

```
The remote VNC server supports the following security type
which does not perform full data communication encryption :
```

```
  2 (VNC authentication)
```

## 10342 - VNC Software Detection

### Synopsis

The remote host is running a remote display software (VNC).

### Description

The remote host is running VNC (Virtual Network Computing), which uses the RFB (Remote Framebuffer) protocol to provide remote access to graphical user interfaces and thus permits a console on the remote host to be displayed on another.

### See Also

<https://en.wikipedia.org/wiki/Vnc>

### Solution

Make sure use of this software is done in accordance with your organization's security policy and filter incoming traffic to this port.

### Risk Factor

None

### Plugin Information

Published: 2000/03/07, Modified: 2017/06/12

### Plugin Output

tcp/5900/vnc

```
The highest RFB protocol version supported by the server is :
```

```
3.3
```

## 135860 - WMI Not Available

### Synopsis

WMI queries could not be made against the remote host.

### Description

WMI (Windows Management Instrumentation) is not available on the remote host over DCOM. WMI queries are used to gather information about the remote host, such as its current state, network interface configuration, etc.

Without this information Nessus may not be able to identify installed software or security vulnerabilities that exist on the remote host.

### See Also

<https://docs.microsoft.com/en-us/windows/win32/wmisdk/wmi-start-page>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2020/04/21, Modified: 2024/12/30

### Plugin Output

tcp/445/cifs

```
Can't connect to the 'root\CIMV2' WMI namespace.
```

## 100669 - Web Application Cookies Are Expired

### Synopsis

HTTP cookies have an 'Expires' attribute that is set with a past date or time.

### Description

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, Nessus has detected that one or more of the cookies have an 'Expires' attribute that is set with a past date or time, meaning that these cookies will be removed by the browser.

### See Also

<https://tools.ietf.org/html/rfc6265>

### Solution

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If needed, set an expiration date in the future so the cookie will persist or remove the Expires cookie attribute altogether to convert the cookie to a session cookie.

### Risk Factor

None

### Plugin Information

## 85601 - Web Application Cookies Not Marked HttpOnly

### Synopsis

---

HTTP session cookies might be vulnerable to cross-site scripting attacks.

### Description

---

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, one or more of those cookies are not marked 'HttpOnly', meaning that a malicious client-side script, such as JavaScript, could read them. The HttpOnly flag is a security mechanism to protect against cross-site scripting attacks, which was proposed by Microsoft and initially implemented in Internet Explorer. All modern browsers now support it.

Note that this plugin detects all general cookies missing the HttpOnly cookie flag, whereas plugin 48432 (Web Application Session Cookies Not Marked HttpOnly) will only detect session cookies from an authenticated session missing the HttpOnly cookie flag.

### See Also

---

<https://www.owasp.org/index.php/HttpOnly>

### Solution

---

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If possible, add the 'HttpOnly' attribute to all session cookies and any cookies containing sensitive data.

### Risk Factor

---

None

## 85601 - Web Application Cookies Not Marked HttpOnly

### Synopsis

---

HTTP session cookies might be vulnerable to cross-site scripting attacks.

### Description

---

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, one or more of those cookies are not marked 'HttpOnly', meaning that a malicious client-side script, such as JavaScript, could read them. The HttpOnly flag is a security mechanism to protect against cross-site scripting attacks, which was proposed by Microsoft and initially implemented in Internet Explorer. All modern browsers now support it.

Note that this plugin detects all general cookies missing the HttpOnly cookie flag, whereas plugin 48432 (Web Application Session Cookies Not Marked HttpOnly) will only detect session cookies from an authenticated session missing the HttpOnly cookie flag.

### See Also

---

<https://www.owasp.org/index.php/HttpOnly>

### Solution

---

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If possible, add the 'HttpOnly' attribute to all session cookies and any cookies containing sensitive data.

### Risk Factor

---

None

## 85602 - Web Application Cookies Not Marked Secure

### Synopsis

HTTP session cookies might be transmitted in cleartext.

### Description

The remote web application sets various cookies throughout a user's unauthenticated and authenticated session. However, there are instances where the application is running over unencrypted HTTP or the cookies are not marked 'secure', meaning the browser could send them back over an unencrypted link under certain circumstances. As a result, it may be possible for a remote attacker to intercept these cookies.

Note that this plugin detects all general cookies missing the 'secure'

cookie flag, whereas plugin 49218 (Web Application Session Cookies Not Marked Secure) will only detect session cookies from an authenticated session missing the secure cookie flag.

### See Also

<https://www.owasp.org/index.php/SecureFlag>

### Solution

Each cookie should be carefully reviewed to determine if it contains sensitive data or is relied upon for a security decision.

If possible, ensure all communication occurs over an encrypted channel and add the 'secure' attribute to all session cookies or any cookies containing sensitive data.

### Risk Factor

None

## 40773 - Web Application Potentially Sensitive CGI Parameter Detection

### Synopsis

An application was found that may use CGI parameters to control sensitive information.

### Description

According to their names, some CGI parameters may control sensitive data (e.g., ID, privileges, commands, prices, credit card data, etc.). In the course of using an application, these variables may disclose sensitive data or be prone to tampering that could result in privilege escalation. These parameters should be examined to determine what type of data is controlled and if it poses a security risk.

\*\* This plugin only reports information that may be useful for auditors

\*\* or pen-testers, not a real flaw.

### Solution

Ensure sensitive data is not disclosed by CGI parameters. In addition, do not use CGI parameters to control access to resources or privileges.

### Risk Factor

None

### Plugin Information

Published: 2009/08/25, Modified: 2021/01/19

### Plugin Output

tcp/80/www

```
Potentially sensitive parameters for CGI /dvwa/login.php :  
password : Possibly a clear or hashed password, vulnerable to sniffing or dictionary attack
```

### Synopsis

The remote web server hosts linkable content that can be crawled by Nessus.

## 11032 - Web Server Directory Enumeration

### Synopsis

It is possible to enumerate directories on the web server.

### Description

This plugin attempts to determine the presence of various common directories on the remote web server. By sending a request for a directory, the web server response code indicates if it is a valid directory or not.

### See Also

<http://projects.webappsec.org/w/page/13246953/Predictable%20Resource%20Location>

### Solution

n/a

### Risk Factor

None

### References

XREF           OWASP:OWASP-CM-006

### Plugin Information

Published: 2002/06/26, Modified: 2024/06/07

### Plugin Output

tcp/80/www

```
The following directories were discovered:  
/cgi-bin, /doc, /test, /icons, /phpMyAdmin, /twiki/bin
```

```
While this is not, in and of itself, a bug, you should manually inspect  
these directories to ensure that they are in compliance with company  
security standards
```

### Synopsis

---

The remote web server hosts office-related files.

### Description

---

This plugin connects to the remote web server and attempts to find office-related files such as .doc, .ppt, .xls, .pdf etc.

### Solution

---

Make sure that such files do not contain any confidential or otherwise sensitive information and that they are only accessible to those with valid credentials.

### Risk Factor

---

None

### Plugin Information

---

Published: 2003/03/19, Modified: 2022/04/11

### Plugin Output

---

tcp/80/www

```
The following office-related files are available on the remote server :
```

```
- Adobe Acrobat files (.pdf) :  
  /mutillidae/documentation/mutillidae-installation-on-xampp-win7.pdf
```

## 11422 - Web Server Unconfigured - Default Install Page Present

### Synopsis

The remote web server is not configured or is improperly configured.

### Description

The remote web server uses its default welcome page. Therefore, it's probable that this server is not used at all or is serving content that is meant to be hidden.

### Solution

Disable this service if you do not use it.

### Risk Factor

None

### Plugin Information

Published: 2003/03/20, Modified: 2018/08/15

### Plugin Output

tcp/8180/www

```
The default welcome page is from Tomcat.
```

## 10662 - Web mirroring

### Synopsis

Nessus can crawl the remote website.

### Description

This plugin makes a mirror of the remote website(s) and extracts the list of CGIs that are used by the remote host.

It is suggested that you change the number of pages to mirror in the 'Options' section of the client.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2001/05/04, Modified: 2024/12/30

### Plugin Output

tcp/80/www

```
Webmirror performed 100 queries in 69s (1.0449 queries per second)
```

```
The following CGIs have been discovered :
```

```

## 11424 - WebDAV Detection

### Synopsis

---

The remote server is running with WebDAV enabled.

### Description

---

WebDAV is an industry standard extension to the HTTP specification.

It adds a capability for authorized users to remotely add and manage the content of a web server.

If you do not use this extension, you should disable it.

### Solution

---

<http://support.microsoft.com/default.aspx?kbid=241520>

### Risk Factor

---

None

### Plugin Information

---

Published: 2003/03/20, Modified: 2011/03/14

### Plugin Output

---

tcp/80/www

## 24004 - WebDAV Directory Enumeration

### Synopsis

Several directories on the remote host are DAV-enabled.

### Description

WebDAV is an industry standard extension to the HTTP specification.

It adds a capability for authorized users to remotely add and manage the content of a web server.

If you do not use this extension, you should disable it.

### Solution

Disable DAV support if you do not use it.

### Risk Factor

None

### Plugin Information

Published: 2007/01/11, Modified: 2011/03/14

### Plugin Output

tcp/80/www

```
The following directories are DAV enabled :  
- /dav/
```

### Synopsis

It was possible to obtain the network name of the remote host.

### Description

The remote host is listening on UDP port 137 or TCP port 445, and replies to NetBIOS nbtscan or SMB requests.

Note that this plugin gathers information to be used in other plugins, but does not itself generate a report.

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 1999/10/12, Modified: 2021/02/10

### Plugin Output

udp/137/netbios-ns

```
The following 5 NetBIOS names have been gathered :
```

```
METASPLOITABLE = Computer name
METASPLOITABLE = Messenger Service
METASPLOITABLE = File Server Service
WORKGROUP      = Workgroup / Domain name
WORKGROUP      = Browser Service Elections
```

```
This SMB server seems to be a Samba server - its MAC address is NULL.
```

## 17219 - phpMyAdmin Detection

### Synopsis

The remote web server hosts a database management application written in PHP.

### Description

The remote host is running phpMyAdmin, a web-based MySQL administration tool written in PHP.

### See Also

<https://www.phpmyadmin.net/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2005/02/25, Modified: 2022/06/01

### Plugin Output

tcp/80/www

```
The following instance of phpMyAdmin was detected on the remote host :
```

```
Version : 3.1.1
URL      : http://192.168.50.150/phpMyAdmin/
```

## 52703 - vsftpd Detection

### Synopsis

An FTP server is listening on the remote port.

### Description

The remote host is running vsftpd, an FTP server for UNIX-like systems written in C.

### See Also

<http://vsftpd.beasts.org/>

### Solution

n/a

### Risk Factor

None

### Plugin Information

Published: 2011/03/17, Modified: 2019/11/22

### Plugin Output

tcp/21/ftp

```
Source   : 220 (vsFTPd 2.3.4)
Version  : 2.3.4
```
